

Background

- Eye surgeries are performed in from premature babies to adolescence.
- With the advancement of the medical support, every year smaller and smaller babies got eye surgeries.
- In addition, the most of the patients are relatively healthy and it would be okay to be done surgeries on the bases of out-patients.
- In this webinar, we would like to cover the common eye surgeries, eye surgery for premature babies and considering the intraocular pressure.
- Dr Hee-Soo Kim (Korea) - ASPA education committee and the webinar leader, Dr Teddy Fabila (Philippines) - the co-moderator, Dr Catherine Reyes- the webinar IT Support contributed ideas to organise this webinar as per ASPA requirements.

Webinar speakers

- We began with Dr Ji-Hyun Lee describing naesthesia for common paediatric ophthalmic surgeries such as strabismus surgeries and cataract. She also covered the premedication concerns.
- Dr Lan Yao discussed anaesthesia for retinopathy surgery in premature infants and she presented the many studies and clinical tips for these babies.
- And finally, Dr Nur Hafiizhoh Abd Hamid spoke the factors affecting intraocular pressure and the operating field. She introduced Bell' phenomenon.
- We had ample time for discussion in Q and A session and most queries of the audience were addressed.

Time (SGT)	Speakers	Topics
1700H	Dr Hee-Soo Kim	Welcome Speakers' introduction
1705H	Dr Ji-Hyun Lee	“Anaesthesia for common paediatric ophthalmic surgeries”
1725H	Dr Lan Yao	“Anaesthesia for retinopathy surgery in premature infants”
1745H	Dr Nur Hafiizhoh Abd Hamid	“Factors affecting intraocular pressure and the operating field”
1805H	Panel discussion/Q and A session

How would you rate today's webinar?

171 responses

Did not enjoy

Thoroughly enjoyed

What is the best part of the webinar?

- Gaining new knowledge specially MACBell
- Poll questions
- Everything was insightful
- The small tips in making the anaesthesia experience smoother in ophthalmic surgeries
- Precise

What is the best part of the webinar?

- Presentation and Discussion session
- question and answer session
- Good for everyone
- Uninterrupted flow, right polling q.s, didactic summaries, topic choice, practical lectures
- Learning new techniques on sedation

How can we improve ASPA-FLEX webinar series?

- During the discussion, those who can speak English can translate. So the question to the speaker is not left unanswered.
- It is excellent as it is but maybe you could allot a little more time for some lectures
- Increase panel discussion time
- Let us hear case discussions from African continent

How can we improve ASPA-FLEX webinar series?

- You can increase the number of speakers
- Everything is OK
- Q&A test or scenario
- Need more video and discussion
- Continue having great speakers
- Well done keep it up

What other topics would you like to be discussed in subsequent webinars?

- Thoracic surgery
- Regional Block For Eye Surgery
- chronic pain management
- About Block Anaesthesia
- Interesting case reports, problem case-based discussions with experts
- No particular topic
- Laryngeal edema management in operating room
- Incorporation of play in pain and recovery of post op patients

What other topics would you like to be discussed in subsequent webinars?

- Topics for day-care
- The critically ill child presenting for surgery
- Blocks for laparoscopic surgeries
- Central and periphery Blocks in paediatrics
- NA
- patients with CHDs for non cardiac surgery/outpatient procedures
- Anaesthesia for the critically ill child
- Congenital hear diseases
- pediatric regional blocks
- Massive transfusion

Recommendations

- I guess the language should not be the huddle or obstacle for this webinar as a speaker or the participants. Most Asian people use their own languages.
- If possible, we need to increase the lecture time (about 25-30 minutes) and reduce the number of lectures for more discussion.

Many thanks.
